 Web scraping is a common and effective way of collecting data for projects and for work. In this guide, we'll be touring the essential stack of Python web scraping libraries (<https://getpocket.com/save?title=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatascience.com/python-web-scraping-libraries>) (<https://www.linkedin.com/shareArticle?trk=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatascience.com/python-web-scraping-libraries>) **Why only 5 libraries?**

 There are dozens of packages for web scraping out there... but you only need a handful to be able to scrape almost any site. This is an opinionated guide. We've decided to feature the 5 Python libraries for web scraping that we love most. (<http://www.facebook.com/sharer.php?u=http://www.elitedatascience.com/python-web-scraping-libraries>) Together, they cover all the

web-scraping-libraries)  (<https://plus.google.com/share?text=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatascience.com/python-web-scraping-libraries>)

Email

(mailto:?subject=Check

out this **Do I need to learn every library below?** site%20&body=Check (<https://elitedatascience.com/python-web-scraping-libraries>)

out No, but everyone will need Requests, because it's how you communicate with

this websites. The rest depend on your use case. Here's a rule of thumb:  
 site%20https://elitedatasience.com/python-

web- You should learn at least one of BeautifulSoup or lxml. Pick depending on  
 scraping- which is more intuitive for you (more on this below).  
 libraries)

- Learn Selenium if you need to scrape sites with data tucked away by

(https://github.com/Save/

title=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatasience.com/python-  
 web- Learn Scrapy if you need to build a real spider or web-crawler, instead of just  
 (https://www.linkedin.com/shareArticle?

scraping- Scrapy a few pages here and there.  
 libraries)

web-  
 scraping-  
 libraries)

Why are they tasty?

f Because they are yummy! So without further ado...

(http://www.facebook.com/sharer.php?

u=https://elitedatasience.com/python-

web-

scraping- • The Stew: BeautifulSoup 4

libraries) • The Salad: lxml

g • The Restaurant: Selenium

(https://plus.google.com/share?

text=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatasience.com/python-

web-

scraping- **The Farm: Requests**

libraries)

The Requests library is vital to add to your data science toolkit. It's a simple yet powerful HTTP library, which means you can use it to access web pages.

(https://twitter.com/intent/tweet?

text=5+Tasty+Python+Web+Scraping+Libraries&url=https://elitedatasience.com/python-

web- We call it The Farm because you'll be using it to get the raw ingredients (i.e. raw  
 scraping- HTML) for your dishes (i.e. usable data).  
 libraries)

Its simplicity is definitely its greatest strength. It's so easy use that you could

jump right in without reading documentation.

(http://elitedatasience.com/python-  
 url=https://elitedatasience.com/python-

web-

scraping- For example, if you want to pull down the contents of a page, it's as easy as:

libraries&title=5%20Tasty%20Python%20Web%20Scraping%20Libraries)

Python

```
import requests
page = requests.get('http://examplesite.com')
contents = page.content
```

(mailto:?

subject=Check

out

this

site%20&body=Check

But that's not all that Requests can do. It can access API's, post to forms, and much more.

Plus, it's got character... It's the only library that calls itself Non-GMO, organic,

and grass-fed. You gotta love that.

## Resources

(https://getpocket.com/save?

title=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatascience.com/python-

web-requests-quickstart-guide (http://docs.python-

requests.org/en/master/user/quickstart/) – Official documentation. Covers

practical topics like passing parameters, handling responses, and configuring

headers.

## The Stew: BeautifulSoup 4

(http://www.elitedatascience.com/?u=https://elitedatascience.com/python-

After you have your ingredients, now what? Now you make them into a stew... a beautiful stew.

Beautiful Soup (BS4) is a parsing library that can use different **parsers**. A parser is simply a program that can extract data from HTML and XML documents.

Beautiful Soup's default parser comes from Python's standard library. It's flexible

and forgiving, but a little slow. The good news is that you can swap out its parser

with a faster one if you need the speed.

(https://twitter.com/intent/tweet?

One advantage of BS4 is its ability to automatically detect encodings. This allows it to gracefully handle HTML documents with special characters.

libraries)

In addition, BS4 can help you navigate a parsed document and find what you need. This makes it quick and painless to build common applications. For

example, if you wanted to find all the links in the web page we pulled down

earlier, it's only a few lines:

libraries&title=5%20Tasty%20Python%20Web%20Scraping%20Libraries)

web-scraping-

libraries)

Python

```
from bs4 import BeautifulSoup
soup = BeautifulSoup(contents, 'html.parser')
soup.find_all('a')
```

 site%20https://elitedatascience.com/python-  
 web-  
 scraping-  
 libraries) **Resources**  
 • **XML Documentation** (<http://xml.de/index.html#introduction>) – Official documentation.  
 • **HTML Scraping with lxml and Requests** (<http://docs.python-guide.org/en/latest/scenarios/scrape/>) – Short and sweet tutorial on pulling a

webpage with Requests and then using XPath selectors to mine the desired data. This is more beginner-friendly than the official documentation.  
 (https://www.linkedin.com/shareArticle?title=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatascience.com/python-web-scraping-libraries&trk=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatascience.com/python-web-scraping-libraries)

## The Restaurant: Selenium

Sometimes, you do need to go to a restaurant to eat certain dishes. The farm is great, but you can't find everything there.  
 (http://www.facebook.com/sharer.php?u=https://elitedatascience.com/python-web-scraping-libraries)

Likewise, sometimes the Requests library is not enough to scrape a website.

Some sites out there use JavaScript to serve content. For example, they might wait until you scroll down on the page or click a button before loading certain content.  
 (https://plus.google.com/share?text=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatascience.com/python-web-scraping-libraries)

Other sites may require you to click through forms before seeing their content.

Or select options from a dropdown. Or perform a tribal rain dance...

For these sites, you'll need something more powerful. You'll need Selenium (which can handle everything except tribal rain dancing).  
 (https://twitter.com/intent/tweet?text=5+Tasty+Python+Web+Scraping+Libraries&url=https://elitedatascience.com/python-web-scraping-libraries)

Selenium is a tool that automates browsers, also known as a web-driver. With it, you can actually open a Google Chrome window, visit a site, and click on links. Pretty cool, right?

It also comes with Python bindings for controlling it right from your application.  
 (http://elitedatascience.com/python-web-scraping-libraries)

This makes it a breeze to integrate with your chosen parsing library.

**Resources**

libraries)

## The Chef: Scrapy

([https://getpocket.com/save?](https://getpocket.com/save?title=5%20Tasty%20Python%20Web%20Scraping%20Libraries&url=https://elitedatascience.com/python-web-scraping-prices-using-selenium-and-python/)

Ok, we covered a lot just now. You've got Requests and Selenium for fetching web-HTML/XML from web pages. Then, you can use BeautifulSoup or lxml to parse

scraping-prices using Selenium and lxml.  
libraries) into useful data.

scraping-  
libraries)

But what if you need more than that? What if you need a complete spider that  
f can crawl through entire websites in a systematic way?

([http://www.facebook.com/sharer.php?](http://www.facebook.com/sharer.php?u=https://elitedatascience.com/python-web-scraping-prices-using-selenium-and-python/)

Introducing: Scrapy! Scrapy is technically not even a library... it's a complete web scraping framework. That means you can use it to manage requests, preserve user sessions, follow redirects, and handle output pipelines.

It also means you can swap out individual modules with other Python web

scraping libraries. For instance, if you need to insert Selenium for scraping

dynamic web pages, you can do that (see example

([http://stackoverflow.com/questions/17975471/selenium-with-scrapy-for-](http://stackoverflow.com/questions/17975471/selenium-with-scrapy-for-dynamic-page)

dynamic-page)).
